# Annexure E WATER AND SANITATION DEPARTMENT

# DEPARTMENTAL BUSINESS PLAN 2019/2020

DIRECTOR: MICHAEL JOHN WEBSTER CONTACT PERSON: ZOLILE BASHOLO

CITY OF CAPE TOWN ISIXEKO SASEKAPA STAD KAAPSTAD

Making progress possible. Together.

## VISION OF THE CITY:

- To be an opportunity city that creates an enabling environment for economic growth and job creation, and to provide assistance to those who need it most.
- To deliver quality services to all residents.
- To serve the citizens of Cape Town as a well-governed and corruption free administration.

In pursuit of this vision the City's mission is as follows:

- To contribute actively to the development of its environment, human and social capital
- To offer high-quality services to all who live in, do business in or visit Cape Town
- To be known for its efficient, effective and caring government

## PURPOSE OF THE SDBIP

This is a one-year plan giving effect to the IDP and the budget. It sets out the strategies in quantifiable outcomes that will be implemented over the 2019/2020 financial year. It considers what was set out in the IDP as well as the Directorate Executive Summary.

It indicates what the Department needs to do to deliver on the IDP objectives, how this will be done, what the outcomes will be, what processes it will be followed and what inputs will be used.

### **1 EXECUTIVE SUMMARY**

The Water and Sanitation Department continues to make significant progress in providing water and sanitation services to the City of Cape Town (CCT) residents since the formation of one Metro administration. All formal areas are adequately provided for with water and sanitation services while services within informal settlement areas are continually being improved.

The principal challenge for the Department is to maintain an existing water and sanitation service for the city while also providing services for an ever-increasing number of households in a sustainable way. This has to be achieved in the context of providing basic needs, ensuring economic growth, maintaining an ageing infrastructure, limiting negative environmental impact, managing water resource scarcity and consolidating a transformed metro administrative infrastructure.

To ensure sustainable, equitable, reliable and financially viable provision of water and sanitation services, the Department has developed and is implementing strategies that address the priorities reflected in the scorecard, represented by the Service Delivery and Budget Implementation Plan (SDBIP), to ensure effective water services management. The strategies also seek to ensure compliance with the National Water Act, Water Services Act and the related regulations, National and City Policies.

The Water and Sanitation SDBIP 2019 provides a departmental overview of service delivery by its core branches. Detail is contained within the Business Plans. The SDBIP is developed in alignment with the City's Integrated Development Plan (IDP).

To ensure and measure rate of progress, CCT internal service level targets (which exceed the national standards) are being used. The aim is to achieve the improved service levels and to encourage the need for the City's residents to adopt a paradigm shift in how they view the availability of the water resource and their use thereof, in line with the Department's implementation of its Vision and Mission.

### Water Resilience

The ongoing drought in the Western Cape has given rise to a number of initiatives focused on averting a crisis in the short term but also incrementally diversifying water sources away from the reliance on surface water. These include ground water as a major thrust, but also wastewater reuse and to a lesser extent desalination. The recovery from the drought and improved dam levels is expected to take a minimum of three years.

To reduce demand on the system, a number of demand management interventions have been implemented which includes aggressive pressure management, leak detection on public and private water infrastructure and the use of treated effluent. All these interventions will receive substantially more funding over the next 3-year period. During the drought, an accelerated installation of water management devices was also used to quickly limit consumption.

The development of expertise to manage the city infrastructure under drought has been a byproduct of the crisis. Many of the Department's resources had to be redirected to managing the impact of the drought with major thrust on diversifying the City's water resource base.

### **Cape Town Water Strategy**

The New Water Strategy (to be tabled for Council adoption in April/May 2019) sets out a refocussed approach for at least the next ten years to secure the City of Cape Town's water future by increasing the available water supply by more than 300 million litres per day in the next 10 years at an approximate cost of R5.7 billion. The aim is to reduce the likelihood of severe water restrictions by increasing the reliability standard of supply from 98% to 99.5% in the future. The strategy explores investment into alternative water sources, including groundwater, wastewater reuse and desalination, to supplement its water supply.

The strategy is based on five commitments:

- 1. Safe access to water and sanitation
  - a. Focus on improving access to water and sanitation in informal settlements
- 2. Wise use
  - a. Promoting water conservation through pricing incentives, regulatory incentives, active citizenship and network management
- 3. Sufficient, reliable water from diverse source
  - a. Surface, groundwater, water reuse and desalinated water. Build new capacity of approximately 300 million litres per day over the next ten years
- 4. Shared benefits from regional water resources

- a. Optimise the economic, social and ecological benefits of regional water resources; reduce the risks; through collaborative processes.
- 5. A water sensitive city
  - a. Optimal use of stormwater and urban waterways for the purposes of flood control, aquifer recharge, water reuse and recreation, based on sound ecological principles. Through new incentives and regulatory mechanisms as well as through the way the City invests in new infrastructure.

Ten principles inform the strategy:

- 1. (Place) value on water
- 2. Grow inclusivity and trust
- 3. Build capacity (of staff and stakeholders)
- 4. Work together and across boundaries
- 5. Design for adaptation
- 6. Live with water (multiple uses of waterways)
- 7. Work with nature
- 8. When it rains, slow (down), store and repurpose (water)
- 9. Ready for shocks
- 10. Stimulate the green economy

The Department is on a trajectory to become a modern professional water service provider, consistent with international best practice. A new Customer Service branch will be developed and implemented in 2019 to raise the bar on putting customers first, improving water and sanitation outcomes in informal settlements, investing in people, improving cash collection operational efficiency and the modernisation and management of metering technology. The New Strategy also addresses the effectiveness of network management, expanding and managing bulk water and wastewater infrastructure, maximising benefits, supporting the transition to a water sensitive city and reducing the risk associated with having to share regional resources.

## 2 PURPOSE AND SERVICE MANDATE OF THE DEPARTMENT

The core business of the Department is to equitably and efficiently provide access to Water and Sanitation Services to all citizens of the City in a sustainable, safe, reliable, environmentally friendly and financially viable way observing the dictates of good governance principles. The department continually seeks to introduce new and innovative methods of service delivery to its citizens whilst meeting all the legislative requirements.

### WATER AND SANITATION DEPARTMENT'S VISION STATEMENT

To be a beacon in Africa through the progressive realisation of Cape Town as a water sensitive city.

### WATER AND SANITATION DEPARTMENT'S MISSION STATEMENT

Provide safe, reliable, sustainable and affordable Water and Sanitation services to Cape Town.

The Strategic Focus Areas to achieve our Mission and Vision:

- Employee and Leadership Development
- Infrastructure Stability
- Water Resource Adequacy
- Product Quality
- Community Sustainability
- Consumer Satisfaction
- Operational Optimisation
- Stakeholder Management and Support
- Financial Viability
- Operational Resilience

We operate within a value system aligned to Batho Pele principles:

- **Integrity**: We maintain the highest level of ethics and fairness in our interaction with each other, our customers and other stakeholders.
- **Respect**: We respect each other's opinion, beliefs, position and contribution to the Department including those of our customers and other stakeholders. All employees are equal in their contributions.
- **Customer focus**: We meet customers' needs by providing excellent service, optimal product performance and efficient support system. Our customers are the reason for our existence. The environment is our silent customer who shall receive an equal share of our services.
- **Trust**: Our business model and relationship is based on trust. A "Yes" shall mean a Yes and a "No" shall mean a No. Our common purpose, integrity and honesty shall constrain us to have trust in each other. Trust shall be felt, experienced, lived and seen in our Departmental family.
- **Transparency**: We operate safely, openly, honestly and with care for the environment and the community. Transparency shall be defined by the customers and stakeholders we serve.
- **Professional**: We use the right skills or competencies to find appropriate solutions enriched with compassion, innovation, sustainability, cost-effectiveness, accountability and excellence.

#### Table 1: Strategic Intention

Business Focus Area	Strategic Goal	Strategic Intention
	To provide the Department's core service	To sustainably provide basic sanitation services to all residents in the city
Customer Satisfaction	To provide the Department's core service	To sustainably provide basic water services to all residents in the city
	To satisfy the users of the service as much as possible	To achieve a high customer satisfaction levels in all our services
Quality, Operational Optimisation	To implement an accredited Quality Management System for the Department	To implement and maintain ISO 9001 for all our services within budgetary constraints
Quality,	To achieve the best possible effluent discharge quality	To achieve 88% waste water effluent quality to National Standard
Environment	To reduce sewage overflows from spillages, blockages and infrastructure failure as much as possible	To minimise river systems pollution by reducing sewage overflows
	To reduce water losses as far as possible	To reduce Non-Revenue Water for the CCT Reticulation System to less than 18.5% in the next five years
Water Resource	To ensure security of Water Supply for the City into the future, as the lifeblood for sustaining the community and enabling City Economic growth	To improve assurance of supply to 99.5% from the current 98%
and Demand Management	To increase effluent re-use for all possible purposes, thereby reducing total surface water demand	To increase total treated effluent re-used to 30% available volume
	To diversify water sources in order to mitigate the impact reduced surface water as result of drought and changing weather patterns.	To incrementally increase the volume of ground water extraction, introducing wastewater reuse as an additional water source and in a limited way introduce desalination as an emergency supply.
Infrastructure Stability	To operate and maintain the infrastructure for the service sustainably	To refine the implementation of Asset Management Plans for the Department
Operational Optimisation	To consolidate and rationalize all office and depot accommodation to be less dispersed and in the best location, for closer contact with other parts of the organization and with the customer	A new Head office has been established in 2018, Further programmes to rationalize and improve all depots and regional offices must be concluded
	To automate, monitor and control infrastructure as efficiently as possible	To roll out automation, remote monitoring and control systems on treatment works, pump stations and other infrastructure
Financial Sustainability	To ensure income covers expenditure	To improve revenue collection to 95% within 3 years
Employee Development	To train all staff to discharge their functions to high standard of excellence	To develop and enhance Process Engineers and Process Controllers through the Training Centre

## **3 LEGISLATIVE IMPERATIVES**

The Department needs to comply with the following legislation:

- Constitution of the Republic of South Africa
- National Water Act No. 36 of 1998
- National Sanitation Policy; October 1996
- Water Services Act 108 of 1997
- Municipal Structures Act
- Municipal Systems Act
- Municipal Finance Management Act
- National Water Policy, 2016
- Water By-Law
- Treated Effluent By-Law
- Wastewater & Industrial Effluent bylaw
- EPWP Policy 12421; 29 May 2013
- Stormwater Management By-Law, 2005
- National Environmental Management Act, 1998
- Criminal Procedure Act 51 of 1977
- Occupational Health and Safety Act 85 of 1993
- Skills Development Act 97 of 1998

The Water Services Act 108 of 1997 and the National Water Act 36 of 1998 provide the national legislative framework. In addition, the City promulgated three water-related by-laws: the Wastewater and Industrial Effluent By-law (2013), which protects the sewer system by governing private and industrial sewer disposal and usage, a new Water By-law (2010), which has incorporated water conservation and demand management into its provisions and a Treated Effluent Amendment By-law (2015), this bylaw is to be read in conjunction with the Treated Effluent By-law of 2010 which regulates and controls the usage of treated effluent by users.

In 2001, the City also adopted a Water Demand Management (WDM) Policy which has also seen several updates. This policy sets out a framework for the establishment of water demand management mechanisms in the City, including a goal to reduce water demand by specific annual target dates.

Another important guiding document is the Water Services Development Plan (WSDP), which is aligned with the City's IDP and its 5-year planning cycle. Performance against the WSDP has to be, reviewed and reported on annually as per legislation.

### 4 STRATEGIC ALIGNMENT TO THE IDP

# 4.1 Identify and describe the linkages to the strategic Focus Areas and Objectives in the IDP

\*The Water and Sanitation Department has primary linkages to the following Strategic Focus Areas (SFA's) of the Integrated Development Plan (IDP).

### SFA: THE OPPORTUNITY CITY Objective 1.1: Positioning Cape Town as forward looking globally competitive City Programme 1.1. (c) Infrastructure Investment:

This programme pertains to infrastructure-led development and growth. Investment in infrastructure is considered an important enabler of economic growth and poverty reduction. This programme involves the implementation of many smaller projects under the Infrastructure Maintenance Project.

For Water and Sanitation these include:

- Integrated Master Planning of Water and Sanitation Infrastructure where planning for a 20year period occurs which allows for the development and capacity upgrades to be achieved.
- Bulk Water Maintenance will be conducted City-wide so as to ensure that all bulk water infrastructure will either be refurbished or replaced.
- Bulk Sewer Replacement and Rehabilitation of the City's sewer network to accommodate City densification and its Spatial Development Framework (SDF).
- Wastewater Treatment Plant maintenance and upgrades will be implemented to allow for development and capacity upgrades.
- Water Demand Management Interventions including Pressure Management and Treated Effluent re-use, of utmost importance to reduce the water demand as well as to limit usage of potable water to extend the limited water that is available for as long as is required.
- Stormwater system needs protection by various initiatives like stormwater ingress and pollution control. This will assist in the possible alternative use of this scarce resource.
- Security / Law enforcement for Protection of Water and Sanitation Resources and staff, budget has been made available and an interdepartmental Service Level Agreement (SLA) has been adopted to address this issue.
- Invest in a proactive service infrastructure maintenance response system
- An extensive meter technology replacement programme is being considered to ensure accurate water metering and billing and achieve a more accurate and localised water balance for reduction of losses.

Infrastructure Investment research projects include:

 Bulk Water Supply System Augmentation and Maintenance – Further engagement with the national Department of Water & Sanitation (DWS) is necessary to review the water allocations assigned to the City. To successfully augment our water supply, transversal water management, water demand planning and construction of additional bulk water supply schemes will be required.

- Wastewater Treatment Capacity needs to be increased across most of the treatment works across the City. Numerous wastewater plants are scheduled for upgrades.
- Various rehabilitation projects including Vlakteplaas bulk Flood alleviation in Lourens River and Sir Lowry's Pass river upgrade.
- New Water plan where additional resources will be allocated to provide medium- to longterm water resource security.

Support service projects include:

- Scientific Services the laboratories will be upgraded and new equipment acquired, especially for solid waste samples testing.
- Engineering and Assets Management branch: main areas of focus will be Fleet Management, Telemetry, SCADA, integrated asset management and instrumentation.

### Objective 1.2: Leveraging technology for progress Programme 1.2. (a) Digital city programme:

Rapidly advancing technology is constantly introducing new and improved methods and approaches to planning, designing, operating and managing water and sanitation infrastructure.

The smart use of technology will be advanced in the following areas:

- Desalination plants to produce potable water.
- Drilling, monitoring and extraction of deep lying aquifers.
- Advanced metering and logging of the bulk water networks.
- The latest methods of pipeline construction with advanced materials providing improved performance or having the ability to withstand adverse conditions.
- The rehabilitation or lining of sewers with new methods with the increased use of trenchless technology where possible
- Remote recording, logging and software analysis tools for improved network management
- The latest software for planning, analysis and costing for infrastructure development.
- The latest technology for pressure management, monitoring and controlling with increased remote control.
- Smart metering technologies under consideration.
- The increased use of membrane technology for wastewater treatment allowing improved capacity and more compact plants.
- The increased use and accessibility of electronic billing, resulting in improved tracking and analysis for targeted collection.

- Infrastructure fieldwork: Effective portable data acquisition and management systems.
- The maintenance of a digital as-built drawing database
- The expansion and maintenance of spatial information and asset mapping layers (GIS) to improve planning and management.
- The expansion of electronic submission and processing of various types of customer applications to the City.

### Objective 1.3: Economic Inclusion Programme 1.3. (a) Skills Investment:

A skills training programme will be implemented city wide over the remaining IDP term. Water and Sanitation will be implementing an Artisan Pilot Initiative where 88 EPWP semi- skilled workers will be trained and equipped by a skilled and qualified artisan.

### Programme 1.3. (b) EPWP Job Creation:

The EPWP has been embraced by the City, with the department regularly exceeding job opportunity targets set by the programme.

A Sanitation and Maintenance Project in informal settlement communities will be initiated:

- Quality of life improvement: The City's goal is to reduce the poor sanitary conditions that will improve the quality of life for the people living within and around the Informal Settlements communities located City wide.
- Sanitary conditions: Improvement of the poor sanitary conditions and quality of life for the people living within and around Informal Settlements Communities City-wide;
- Ablution facilities: Maintenance and refurbishment of ablution facilities in those areas across the City;
- Awareness: Water conservation and sewer blockages education/awareness campaigns City wide;
- Informal Settlements Sanitation & Maintenance project City wide: Maintenance and refurbishment of ablution facilities across the City.

### Objective 1.4: Resource Efficiency and Security Programme 1.4. (a) Energy-Efficiency and Supply:

The City of Cape Town aims to build a resource efficient economy through the use of technology and reducing its carbon footprint. The city is leading by example by implementing the energyefficient lighting in City owned buildings.

The Northern regional sludge facility's goal upon completion is to produce higher quality bio solids that can be used as fertiliser and to produce a by-product which can be used to generate electricity.

The ongoing challenges at Eskom and resulted intermitted supply has had limited negative effect on the department's ability to deliver a service, thanks to the tough choice of going ahead with the generator programme. An energy inefficient solution but desperately needed one.

### Programme 1.4. (b) Climate Change:

Climate change is a significant socio-economic issue, with environmental consequences and is globally understood to pose considerable risks in the urban environment, particularly to vulnerable people and communities. Effective management of the natural environment and resource efficiency can serve as the best means for buffering / building resilience to climate change impacts. The City's approach also recognizes that there are potential opportunities in responding to climate change proactively and early. The implementation of adaptation interventions is and will be undertaken in sectors such as: economic development, spatial planning, water management, human settlements, disaster risk management, coastal management, biodiversity, food security, transport, catchment management, health, and waste management.

For Water and Sanitation this programme will focus on: climate change adaptation, in so far as ensuring that Cape Town prepares for and adapts to climate change to reduce risks and build adaptive capacity.

A key deliverable in the next few years is the diversification of our water resource with increased extraction of ground water from various aquifers, to start and incrementally increase production of water via reuse (wastewater to potable), desalination and optimal use of stormwater for flood control. This is in line with the change in vision and mission in building awareness, resource and operational capacity as a water sensitive city.

The two initiatives for water and Sanitation in close consultation with stormwater are as follows:

• <u>Sir Lowry's Pass River initiative:</u>

The purpose of this project is to alleviate the risk of flooding in the existing built up areas of Gordon's Bay, and to free up land for affordable housing and other development from the existing T2 (N2) through Gordon's Bay to the False Bay coast. This will be done by increasing the capacity of the river by widening and deepening it, together with all appurtenant works, so that the river can accommodate a 1:100-year flood event. The final phase of the project to still be implemented.

### • Lourens River initiative:

The purpose of this project is to alleviate the risk of flooding in the Somerset West CBD and other built up areas adjacent to the river from Vergelegen Farm in the upper catchment down to the False Bay coast in Strand. This will be done by increasing the capacity of the river by widening, so that the river can accommodate a 1:8-year flood event.

### Programme 1.4. (c) City Resilience:

As part of the emergency water resource scheme, the Water and Sanitation Department has had to prioritise a number of projects in order to provide water due to the current drought conditions in Cape Town.

- Water Reclamation from Wastewater the reclamation of wastewater by treatment to potable standards for injection into the Bulk Water system.
- Cape Flats Aquifer the drilling of boreholes and abstraction of ground water from the Cape flats aquifer which will be treated to potable standards for injection into the Bulk Water system.
- Desalination various sites have been identified as possible desalination plant sites for the production of potable water by means of sea water reverse osmosis.
- Table Mountain group aquifer the drilling of boreholes, abstraction of ground water for the conveyance to existing dams for treatment.
- Atlantis/Silwerstroom aquifer the drilling of boreholes, abstraction of ground from the Atlantis/Silwerstroom aquifer which will be treated to potable standards for injection into the Bulk Water system.
- Pressure management the main focus is on drought related interventions to reduce water demand city wide.
- Treated Effluent reuse drought related interventions which include the provision of standpipes and tap-off points of treated effluent for alternative use.
- There appears to increasing need to balance treated effluent uses to the most optimal scale and ratio.

### SFA: THE CARING CITY Objective 3.1 Excellence in Basic Service delivery Programme 3.1. (a) Excellence in Basic Service delivery:

As part of the ODTP process, due to its specialized and challenging nature Informal Settlements has been setup as a department on its own, with the aim of providing focused attention. However, the Basic Services Branch will form part of the Water and Sanitation Department as of 01 April 2019. The city as a water authority is however still responsible for the bulk water supply, the reticulation of water and sewer as well as the treatment of wastewater. Currently there are no backlogs service delivery in terms of minimum standard. The City is continuing to look at innovative measure to improve delivery such as the portable flush toilet (PFT) automated emptying and washing facility which has been successfully implemented at the Borcherds Quarry WWTW.

The ongoing management of an indigent register and providing arrangements to write off outstanding water bills as well as the installation of demand management devices is a continuing effort to responsibly reduce the financial burden on low income households.

The City's wastewater treatment facilities are coming under increasing pressure and over the next 5 years five WWTW will undergo major upgrades namely Zandvliet, Macassar, Potsdam, Athlone and Borcherds Quarry WWTWs. Approximately 3 of these facilities is expected to be completed by 2024 allowing substantial increase in WWT capacity in various catchments of the city.

Additional water sources:

### • <u>Water reusing initiative</u>

This will involve the treatment and re-use of water which is piped via a separate network of pipes to clients for irrigation. Given the current success of this service, the City is looking to expand the treated effluent reticulation network to other areas of the city, with the Athlone, Bellville and Macassar areas being most likely to benefit as there is a larger demand in these areas as well as, in most cases, fewer infrastructure requirements.

### • Springs and streams

The City is working to make use of the significant excess flow that some of these streams offer. Certain high-yielding springs can be used for irrigation of sports fields, parks and other larger-scale gardens. Currently the known use in the CBD is the irrigation at the Cape Town Stadium and surrounding area, and irrigation in sections of the Company's Garden. The main springs are accumulating about 3ML of water to the Molteno reservoir. The Waterhof

Spring has a yield of 0.8ml/d which is utilised for irrigation in Green Point. The City has just concluded a study regarding how this water can be used more extensively in a sustainable manner. The City is engaging with the Department of Water and Sanitation and other stakeholders and submitted an amendment application for to use of the water. The amendment includes more coordinates as the current license is limited to specific areas.

### Programme 3.1. (c) Housing:

This will be in the form of a services project that includes densification in targeted areas in Cape Town. The Water and Sanitation Department provides a support by ensuring bulk infrastructure is in place in the areas identified for densification. The infrastructure investment projects will form part of the support projects for the housing program. Over the next three years there will be an average allocation R88M for link services and possible infrastructure upgrades related to low income housing projects. This is a minimal budget and will augment USDG funding.

# Objective 3.2 Mainstreaming basic service delivery to informal settlements and backyard dwellers Programme 3.2. (b) Human Settlements:

Will be in the form of Informal Settlements Services Project that will ensure that people has access to the basic services i.e. water and sanitation services. There is a new Informal Settlements and Back Yarders Department that was developed as per the new ODTP that will take the lead on projects pertaining to Informal Settlements and Back Yarders. Basic Services of Informal Settlements will move back to the Water and Sanitation Department as of 01 April 2019. As above an average of R88M has been allocated for the provision of link services and possible infrastructure upgrades to informal settlements and backyard residences.

The current standard of service as described below is what the programme strives to continually deliver to all of the many informal settlements.

- <u>Sanitation technology solutions</u>: The water supply to informal settlements is provided in the form of standpipes while for sanitation there is a range of sanitation technology solutions implemented, based on the specific conditions of the settlement.
- <u>Waterless technology solutions</u>: Due to the severe three-year-drought, other waterless technologies will be explored in the five-year term. Partnerships with reputable institutions e.g. Tertiary institutions, the Water Research Commission and others will to be included in agreements to ensure that the City remains the "beacon in Africa for the provision of Water and Sanitation services".
- <u>Repairs and maintenance:</u> The ever-present harsh conditions in informal settlements remain a challenging environment to work in. As a result, the ongoing maintenance and repairs to

the existing infrastructure in Informal Settlements dictate that realistic performance indicators be utilised.

- Installations: The city plan to deliver across the city over the next 5 years
  - Water supply via standpipes 2017-2023 at an estimated R 24 Million
  - Sanitation installations 2017-2023 at an estimated R 118 Million
- <u>Capacity enhancement</u>: Additional resources will be made available to the Informal Settlement Unit to enhance its capacity, of which the Expanded Public Works Programme (EPWP) is key. It is being embraced throughout the Department of Water and Sanitation to improve service delivery while also creating jobs and hence alleviating poverty.

### SFA: THE INCLUSIVE CITY Objective 4.3 Building Integrated Communities Programme 4.3. (b) Citizen Value:

Responsible management of infrastructure and engagement of communities on the importance of respecting and protecting public infrastructure. Getting citizens to understand responsibility of the sustainable use of our water resource giving concrete ways in which citizens could contribute in realizing Cape Town as a water sensitive city. This includes addressing non-payment, selfregulating demand management, leak detection by home owners. Early public reporting of bursts, leaks, water theft and incidence of vandalism.

Getting both the paying and non-paying customer to understand the changes in the tariff structure and how it relates to the access to water as a right.

The tighter management and enforcement of the Development Contribution (DC) Policy as well as providing Citizens with the tools to do preparatory calculation of DC's.

Explore with developers' opportunities of the use of DC's that will ultimately improve the overall network operation and management.

### Programme 4.3. (c) Public Participation:

### Customer engagement project:

The purpose of the project is to improve service delivery to all residents, businesses and visitors to Cape Town by enhanced customer engagement across all touch points, through all channels across the City. The Water and Sanitation Department will need to implement and adhere to the policies generated via this project.

### Programme 4.3. (h) Cross-subsidisation:

The City has a significant number of people living in informal settlements, backyarders and those who fall into the income category as indigent. All settlements have been provided with water and sanitation services that at least satisfies the minimum standards. In line with embracing water as a right it is accepted that there is the paying and non-paying customers. The city is therefore faced with the challenge of achieving a balance in allowing development to occur and achieve mix of income groups that will help cross subsidisation of the cost of installation and operation of water and sanitation infrastructure. The planning of water and sanitation infrastructure is led by the land use planning which is a Transport Orientated Development approach that aims to make efficient use a corridors and zones determining areas where crowding of investment will allow for cross subsidisation to occur.

### SFA: THE WELL-RUN CITY Objective 5.1 Operational Sustainability Programme: 5.1. (a) Efficient, Responsible and Sustainable City Services:

The completion of the Water and Sanitation Head Office to centralise splinter units into one office complex, thus eliminating office space rental and long term cost savings for the department is an example of this programme. Several smaller initiatives form part of this program as support services to the department.

The ODTP process has required that the department structure itself on a four area based management system with the greatest impact on the reticulation branch that have to transformed from eight districts into a four region system. The centralisation of the operational areas strengthens the link between senior management and the customer, with a broader base of expertise available per area. The four area based approach also allows for more resources to be deployed where the greatest need is.

### Programme 5.1. (c) Compliant Service Delivery:

Initiatives that perform a supportive function to the department in proficient service delivery. The program is assisted by the completion of the annual customer satisfaction survey.

### Programme 5.1. (e) Service Delivery Skills:

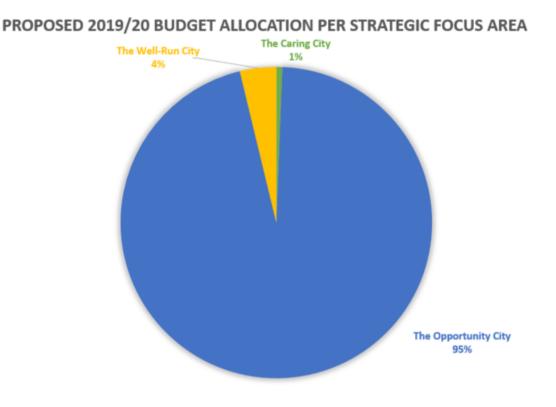

To narrow the skills, gap in the department, staffing strategies have been developed which include individual work skills plans, individual performance management, technical training courses, bursary and mentorship programs.

### Programme 5.1. (f) Service Delivery Improvement:

Initiatives that perform a supportive function to the department in delivering services to efficiently to its customers. The simplified 4 region operational areas have been in place to consolidate resources to improve delivery.

Figure 1: Aerial view of various suburbs in the City of Cape Town

### Figure 2: Proposed 2019/20 Budget Split per SFA

The pie chart above indicates the Water and Sanitation Department budget split as per focus area. It is however often a subjective choice and there are many cases that bridge Focus Areas. It is useful to note that attempts to estimate the pro-poor budget component of water and sanitation over past 3 years has approximated 40% compared to servicing informal settlements and backyarder which was estimated at 12%.

- The Opportunity City creating an environment which promotes sustainable economic growth, investment and job creation.
- The Well –Run City delivering basic services efficiently and effectively to its customers by focusing on financial and operational sustainability, human resource development and organisational restructuring.
- The Caring City is to look after the citizens of Cape Town particularly those in need of assistance, with the Water and Sanitation Department doing all they can to provide basic services for their residents.

The remaining focus areas are not directly linked to the budget however the Department supports The Safe City and Inclusive City strategic focus areas by assisting with various programs and plans listed below:

- The Safe City Water Safety Plan, Incident Management plan, Business Continuity, Emergency Management Plan, Disaster Risk Management Plan
- The Inclusive City Spatial Integration and Transformation Programme, TOD Catalytic Projects Programme, Citizen Value Programme, Public Participation and Cross-subsidisation Program

### 5 PERFORMANCE PROGRESS AND OUTCOMES

### 5.1 Past year's performance

The past year's information is available in the Annual Reports located on the City's website

### 5.2 Areas of Business Improvement

The Department is committed to consistently provide the highest quality water and sanitation services that meet and exceed the requirements and expectations of our consumers by ensuring the implementation of an Integrated Quality Management System that complies with ISO 9001, ISO 14001 and OSHAS 18001. To this end, both a Quality Statement and Customer Service Charter have been accepted for implementation. There is also a Department-wide ISO certification project nearing completion. Together with the Risk Management programmes being implemented, these initiatives will ensure quality and minimise risks.

The Quality Management System has been successfully developed throughout the department according to the requirements of ISO 9001 and other specific standards applicable to each function, as listed below:

UNIT	ISO	OTHER	OTHER	COMMENT
	9001			
Technical Operating Centre (TOC)	$\checkmark$	SANS 990		The first Call Centre in Africa
				to be certified

The following business improvements initiatives are receiving focused attention:

- The Informal Settlements Water and Sanitation Services branch returned to the Water and Sanitation Department on 1 April 2019.
- There is a new Customer Services branch that is being developed and implemented in 2019, to focus on putting its customers first and improve metering and billing effectiveness.
- Arising from the severe drought experienced during 2015 to 2017, alternative water resources are being explored to greater priority, including groundwater, desalination and wastewater reuse.

- With the focus on drought-related interventions, accelerated design and implementation of new pressure management zones (PMZ) and District Metered Areas (DMA) became highly effective in reducing the water demand.
- A new City of Cape Town draft Water Strategy has been circulated for public comment, to be considered for adoption soon. It aims to increase available supply by more than 300 million litres per day in the next 10 years at an approximate cost of R5.7 billion.
- A need has been identified for internal staff with experience and expertise in the development and maintenance of alternative sanitation technologies. This is to further fast track and efficient service delivery and to sustain technology lifecycle maintenance.
- The increasing number of indigent people due to the high rate of urbanisation, coupled with the need to maintain ageing infrastructure, will put stress on the tariffs and subsidies.
- An asset performance and monitoring system, making use of technology in order to improve asset operations and performance, is being investigated.
- A service provider has been employed to assist in developing coaching and mentoring skills of line managers to inter alia support shift workers to cope with a changing environment.
- A communication protocol which addresses the needs of both internal and external customers has been developed and is currently at implementation stage.
- Scientific Services branch has developed productivity standards for its Sampling Laboratory, leading to the Business Development section setting an objective for determining productivity standards across the entire department.

# 6 PARTNERS AND STAKEHOLDERS IN THE STRATEGY PLAN (key stakeholders of the plan)

Partners/Stakeholders	Roles and Responsibilities of Department	Roles and Responsibilities of Stakeholder
Consumers; Communities; Business/Industry; Developers	Service delivery; water and sanitation; Uninterrupted Supply; Reasonable turnaround time on service request; Assessing Development Applications Efficiently; Implementing the DC Policy equitably	Payment for services rendered; Feedback on service problems; Wise water use; Treating public infrastructure with respect for other consumers; Developments that support the City's Spatial Framework
Internal Partners Councillors; External Service Delivery Directorates; Branches of the department	Information sharing; Commitment to transversal functions; Communication of directorate requirements and service standards	Responsible governance; Reciprocal roles
<b>External Partners</b> Institutions of higher learning; National and Provincial Government; National Department of Water and Sanitation; National Treasury	Enable research and partnerships therein; Execute the Water Services Provider function for the City; Information and reporting; Legal and policy compliance;	Regional water resource management and municipal support; Monitoring the Water Service Authority; and provide technical support to the Water Service Authority when required; Monitor City planning via the Build Environment Performance Plan (BEPP).

Table 4: Table showing the relevant stakeholders

# 7 RESOURCES (STAFF AND FINANCIAL)

### 7.1 Staff

7.1.1 Staff Complement Category by Branch

#### Table 5: Staff Complement Category by Branch as at February 2019

Categories	TOTAL	Bulk Water	Catchment and Stormwater Management	Director's Office	Engineering and Asset Management	Finance and Commercial	HR Business Partner	Reticulation	Scientific Services	Support Services	Wastewater	Water Demand Management	Water Resilience Project

Total Permanent filled posts	3739	691	28	3	400	578	26	1438	83	55	335	102	0
Total filled fixed term Contracts	126	0	0	0	11	9	70	8	10	1	2	15	0
Vacant Post	682	89	5	0	70	50	19	325	11	14	55	34	10
Total No. Posts	4547	780	33	3	481	637	115	1771	104	70	392	151	10

Note: Informal Settlement Water & Sanitation branch is not included in the table, added at April 2019.

The Staff stats dramatically reflects the vacant posts with Reticulation topping at 325 posts followed by Bulk Water, EAM, Wastewater Treatment, Finance and Commercial and WDM.

# 7.2 Lead and Contributing Directorate/Department (Link to the City's Transversal Management System)

See SDBIP Annexure A

### 7.3 Indication of possible outsource services

The city has 2 significant long standing outsourcing services for the delivery of water services, namely the operation and maintenance of Zandvliet and Fisantekraal Wastewater Treatment Works (WWTW). The two plants have different historical contractual arrangements. Both sets of assets are city-owned.

Reasons for outsourcing:

Zandvliet WWTW was the first Membrane plant in the country, developed as a Design, Build, Operate and Maintain contract. It was found that the company ran the plant very well and after a prescribed investigation, a business decision was made to award a long-term Operation and Maintenance Contract that continues.

Fisantekraal WWTW is a relatively new plant and conventional in process design. the Operation and Maintenance was outsourced from its initiation.

These long-term outsourcing models will give the city important data on which to benchmark the effectiveness of this mechanism.

### 7.4 Financial Information

### 7.4.1 CAPEX

Below is the summary of the Capex since 2016/17 till 2020/21. For detailed breakdown of the project items please see Appendix B1.

(R '000)

#### Table 6: Capex summary 2016\_2017 till 2020\_2021 (subject to change upon budget approval by council)

\*Source: Proposed Draft Budget Extract 31/01/2019

\*\* Excludes the Informal Settlements branch

Capital expenditure is financed from:

(i) CRR (Capital Replacement Reserve) a fund replenished from surplus in previous financial year,

(ii) EFF (External Financing Funds) loans obtained by the City, attracting interest and depreciation charges and having a direct impact on the tariffs,

(iii) CGD (Capital Grants & Donations), or

(iv) DC (Development Contributions)

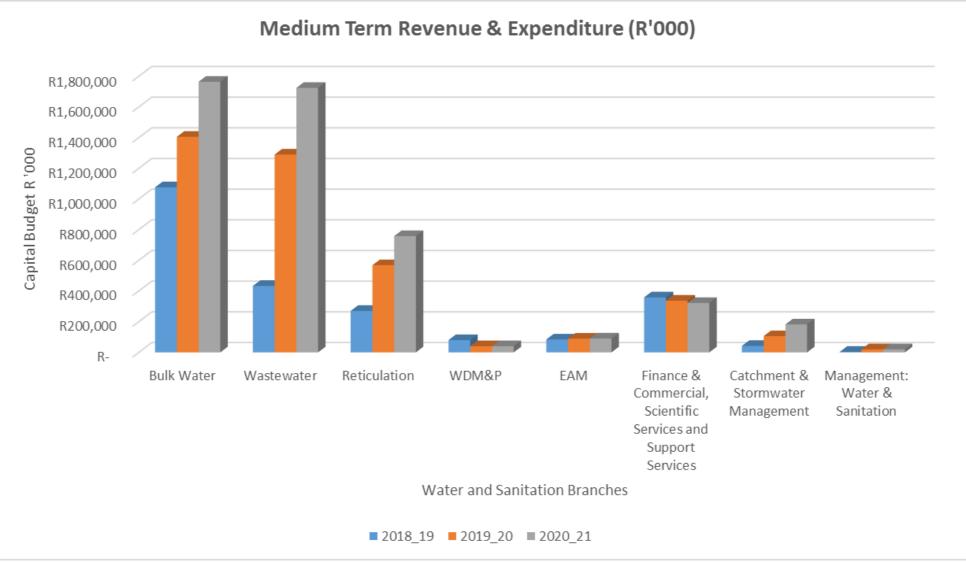

Figure 3: Visual representation of the Capital Budget from 2018/19 to 2020/21 (subject to change upon budget approval by council)

The budget allocation in the 2018/19 financial year was driven by the response to the drought for additional emergency sources of water and the need to speed up the upgrade of 5 Wastewater Treatment Plants, with the most marked increase needed in the Bulk Water branch, to diversify water resource in the form of ground water extraction from various aquifers, wastewater reuse and desalination plants.

The proposed expenditure plan is nevertheless taking a guarded view to avoid expenditure on expensive short-term new water production.

The Wastewater Branch has acknowledged that over the next 5 years they will be under tremendous pressure to make reliable progress on all the upgrades required. To ensure this, four additional project managers are in the process of being appointed. Care is also being taken to make full use of the most experienced project management and technical staff over the upgrade period with plenty of built-in opportunity to transfer skills and deepen human resource capacity. The number of staff retirements over the next 5 years has been factored into the appointments.

The high cost WWT infrastructure upgrades requires EFF funding so the city opted for the most affordable loans, which has been referenced in the media as the KFW loans or "German Money".

#### Table 7: Summary of Operating Expenditure for the period 2016/17 till 2019/20 (subject to change upon approval by council)

			r Outcomes '000)		Medium Term Framewo	
	Budget 2016_2017			Expenditure	Approved Budget 2018/19	Approved Budget 2019/20
Operating Expenditure	R 7 951 844	R 8 210 104	R 9 732 510	R 7 793 121	R 11 088 718	R 11 157 971
% Spent		103.25%		80.07%		
% Increased				22.39%	13.93%	0.62%

\*Source: 2019/20 Proposed Draft Budget

Significantly in the figures above is the 22.4 % and 13.9 % growth in the 2017-18 and 2018-19 budget respectively, this has been as a result of particular branch request for providing an extended/expanded or additional service.

The standard increase is CPIX and will occur if no special request is made.

There was a corporate decision to limit the 2019/20 budget to R 11.2 billion (0.62% increase) because of the high cost of the New Water Plan.

Table 8: Breakdown of Operating Budget for the 2018/19 and 2019/20 financial years (subject to change upon approval by council)

COST ELEMENT	2018/19 Budget R'000	2019/20 Draft Budget R'000	% Increase
Employee Related Cost	R 1 892 050	R 1 901 546	0.50%
Debt Impairment	R 733 581	R 756 025	3.06%
Collection Costs	R 1 948	R 2 029	4.16%
Depreciation & asset impairment	R 636 983	R 669 142	5.05%
Finance Charges	R 0	RO	n/a
Bulk Purchases	R 645 916	R 637 101	-1.36%
Contracted Services	R 693 347	R 693 993	0.09%
Transfers and Subsidies	R500	R 10 521	2004.20%
Other Expenditure	R 484 970	R 649 662	33.96%
Loss on disposal of PPE	R O	RO	n/a
Repairs and Maintenance	R 1 114 943	R 1 023 027	-8.24%
Operational Grants & Donation Projects	R 16 578	R 2 553	-84.60%
Insurance Fund	R 35	R 37	5.71%
Appropriations	R 1 159 302	R 500 064	-56.87%
Internal Utilities Expenditure	R 199 143	R 246 322	23.69%
Bulk Charges Expenditure	R 2 488 146	R 2 828 095	13.66%
Interest Internal Borrowings	R 454 952	R 452 927	-0.45%
Internal Cross Subsidisation Expenditure	R 362 475	R 378 096	4.31%
Insurance Departmental Premiums Expense	R 23 736	R 25 351	6.80%
Activity Based Costs	-R 448 614	-R 278 846	-37.84%
Support Services	R 628 729	R 660 326	5.03%
Total	R 11 088 718	R 11 157 971	0.62%

In summary the budget reflects a negligible increase as per corporate decision. This is also reflected in Employment Related Cost. The most significant growth has been in Bulk Chargers Expenditure to the value of R 339.95 mil (13.66%). Appropriations has been the largest reduction which has been R 659.24 mil (-56.87%) which was attributed to the drought interventions such is pressure management.

## 7.5 Major Projects Aligned to PPM (IDP Linkage)

Major projects aligned to the IDP (available on the PPM system) - see Appendix B1

#### 8 **RISK ASSESSMENT**

Management, with the assistance of the Integrated Risk Management (IRM) Department, has applied their minds and due care taken to ensure that risks which could impact on them not achieving the Directorate's objectives are identified, addressed and managed on a day to day basis in accordance with the City's approved IRM Policy and IRM Framework.

Risk Registers are utilised as a management tool in order to manage identified risks of the Directorate. The risks identified and rated equal to or above the Council approved risk acceptance level will be reported to the Executive Management Team (EMT). The Executive Director to inform/ discuss the Directorate's risks with the relevant Mayoral Committee member on a six-monthly basis.

The Department is committed to integrated risk and safety management in order to ensure consistency, legal compliance, continuous improvement and minimising exposures. The aim is to proactively mitigate (eliminate, avoid, prevent or minimise) any condition, event or situation which could impact on Safety, Health, Risk, Environment or Quality or which has already resulted in injury, death or disease to person/s; loss or damage to council or third party property; misuse or abuse of council resources; impairment of the environment; statutory non-compliance; or which could negatively influence the achievement of council objectives.

- Departmental and Branch risk registers are in place, with reviews at least twice annually.
- A Hazard Identification and Risk Assessment Programme (HIRA) is in place for hazard/risk identification purposes and to assess the effectiveness of control measures in place to counter exposures.
- A Disaster Risk Management Plan is in place, supported by individual site emergency management plans and response protocols for possible scenarios. Emergency simulation exercises are held on a regular basis for readiness and improvement purposes.
- Required legislative Workplace Health and Safety Committees are in place who report to their respective Branch Risk and Safety Committee (x 8), who in turn reports to the W&S Departmental Risk and Safety Committee and who ultimately reports to the City's Central Health & Safety Committee.
- A Risk and Safety Performance Statistics System is in place where injury, vehicle, crime and public liability incidents/accidents are monitored on a monthly basis. This system also

includes the monitoring of compliance in terms of H&S Committees, required legislative appointees, training required, PPE and hazards identified.

- Due to the specialised nature of operational activities, over and above required statutory Section 16(2) Appointees, additional Assistant Section 16(2) Appointments were made in order the give more effective execution to employer management responsibilities in terms of the OHS Act.
- For machinery safety supervision purposes a formal GMR 2(1) and 2(7) (a) Competent Person Appointment system has been put in place in order to ensure consistency and compliance with the OHS Act and its regulations.
- For compliance and improvement purposes, all departmental sites are at least once annually assessed in terms of Machinery Safety and General Health & Safety requirements.
- Protocols are in place to pro-actively manage the safety and security of staff when operating within high risk areas.
- Risk and safety management system procedures are reviewed annually.
- In order to strengthen risk and safety related systems and to complement quality objectives, the department is currently in the process of implementing OHSAS 18001 (health and safety standards) throughout the department, with ISO 14001 (environmental standards) where appropriate.

#### 8.1 Revenue risks

Risks to achieving Water and Waste Directorate's revenue projections:

- Security and quality of supply
- Certain aspects of the economic slowdown are still evident
- The increase in the indigent register
- The possibility City of down-grading to "Junk Status" will have an adverse effect on the economy and earning potential of individuals.

**<u>Capital budget</u>**: The high requirement for necessary infrastructure is driven largely by capacity requirements due to growth and economic development, the refurbishment of current infrastructure as well as projects related to system efficiency which places severe pressure on the City's Capital Budget.

Achieving "Junk Status" will make loan money more expensive, on the other hand low interest rates in Europe has made such a source competitive in the market. It will be important for the City to continue to take advantage of such market opportunities. Large budget items will always require EFF money that needs to be obtained at the most competitive rates with the least owner risk conditions.

During the drought recovery period, the new water plan will continue to be implemented although in a guarded way. The New Cape Town Water Strategy further articulates Capital Budget priorities for the next 10 years.

The capital budget for the 2019/20 financial year includes the Catchment and Stormwater Branch, Servicing of Informal Settlements and a new Customer Services Branch as part of the Water and Sanitation Department.

To fund the required Capital Budget, it is necessary to maximise the use of Grant funding and to make optimal use of the Capital Replacement Reserve (CRR) within the financial constraints. **Operating budget**: It is difficult to reach optimum levels of staff, maintain acceptable levels of infrastructure maintenance and carry the impact of the capital programme within the financial constraints during difficult economic conditions.

The drought crisis has underlined the value of experienced staff and the need for investment in young innovative "tech savvy" engineers with the ability to break down barriers between branches and between field- and office staff. This learning will continue to help build relationships between the Core engineering branches as the Department enters a 5 year highly-pressured period of delivery.

The pressure on the operating budget needs to be addressed via possible above-inflation tariff increases and initiatives to ensure that money due to the City is collected. There is a benefit envisaged from the current debt action and projects related to metering efficiency gains and data purification.

### 9 OBJECTIVES AND INDICATORS OF THE DEPARTMENTAL SDBIP

Refer to SDBIP Annexure A.

### **10 AUTHORISATION**

The undersigned do hereby indicate their agreement with the contents of this document and the outcomes.

		2019/2020 Water and Was Water and Sanitat	te Directorate
		ADDITIONAL REPORTING INDICAT	ORS LINKED TO CIRCULAR 88:
Circular 88 No.	Indicator	Indicator definition	Water and Sanitation Department's capacity to report on Circular 88 indicator elements
WS 1.11	Number of new sewer connections meeting minimum standards	The total number of new sewer connections (defined as connections to a flush toilet connected to the sewerage system or a septic tank or a VIP toilet) made as part of state-subsidised human settlements development. This is inclusive of new sewer connections to communal facilities that meet basic sanitation standards.	<ul> <li>Water and Sanitation can report on the number of new toilets (meeting standards) in informal settlements.</li> <li>The number of new sewer connections made as part of a state-subside or Temporary Relocation Area project should be sourced from Human Settlements Directorate. Overall reporting for this indicator should be a corporate responsibility as it includes elements from two City Directorates.</li> </ul>
WS 2.11	Number of new water connections meeting minimum	Total number of new water connections meeting minimum standards (supply of water is Piped (tap) water inside dwelling/institution, Piped (tap) water inside yard, and/or Community stand: <200 m) as part of state-subsidised human settlements development. This is inclusive of new water connections to communal facilities that meet minimum standards.	<ul> <li>Water and Sanitation can report on the number of new taps (meeting standards) in informal settlements.</li> <li>The number of new water connections made as part of a state-subside or Temporary Relocation Area project should be sourced from Human Settlements Directorate. Overall reporting for this indicator should be a corporate responsibility as it includes elements from two City Directorates.</li> </ul>
WS 3.11	Percentage of Complaints/Callouts responded to within 24 hours (sanitation/wastewater)	Percentage complaints/callouts (outages logged with the municipality) responded to within 24 hours (sanitation/wastewater). Responded to means that someone is on site and has initiated a process of resolving the matter within 24 hours. This does not mean the complaint/callout was resolved, only that the matter was logged, appraised and responded to within 24 hours of notification.	<ul> <li>The City currently does not have systems in place to report on this indicator in a cost effective and auditable manner.</li> <li>Information systems are being developed in partnership with the Information Systems and Technology Department to enable reporting on this indicator.</li> </ul>
WS 3.2	Frequency of mains failures	Number of water mains failures per 100km of mains pipe per year. "Mains" refers to all transmission and distribution pipes for water, the ownership of which is vested in the metro for the purpose of conveying water to consumers.	• Water and Sanitation is able to report on this indicator.

WS2019/1462

	WS 3.2	Total water losses	Total (apparent and real) losses, expressed in terms of annual volume lost per service connection per day.	<ul> <li>Real losses (leaks from storage)</li> <li>These indicator elements are difficult or even impossible to measure in practice and the City does not have systems in place to measure in a cost effective and auditable manner. The Department proposes that these component be estimated and derived by deducting more measureable water balance components.</li> </ul>
105/2019	WS 5.31	Water connections metered as a percentage of total connections	The number of metered water connections as a percentage of the total number of connections in the metro.	<ul> <li>The City's policy is to meter all formal water connections. However, it is noted that connections without meters may exist (for example illegal connections). Systems are in place to ensure that a new water meter is installed and new meter details are loaded on to the City's computer system as soon as an unmetered formal connection is discovered. However, the City does not have systems in place to report on formal connections without meters in a cost effective and auditable manner.</li> <li>Communal standpipes in informal settlements and Temporary Relocation Areas are metered via a bulk meter and are not metered individually.</li> </ul>
