

POLYPHAGOUS SHOT HOLE BORER (*Euwallacea fornicatus*)

Symptoms of an infected tree

BRANCH DIEBACK:

- Cracks on the branch
- Discoloured leaves
- Dry and leafless branches
- Branches break off, revealing webs of galleries filled with black fungus

GUMMING:

- Blobs of goo coming out of the bark
- Oozing of liquid and gum from the beetle holes

ENTRY AND EXIT HOLES:

- Very small holes on the bark of the tree – the size of a sesame seed
- Shotgun-like scars developing around holes

STAINING:

- Brown / dark stains on the bark of the tree

LEGAL STATUS:

- Not yet listed but likely to be listed as category 1b
